## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Kleinberg(US 4,862,114).

The reference by Kleinberg discloses a closed loop circuit oscillator device with a logic element(22, see figure 2A), a crystal(piezo,26), and resistor(24); note external capacitors(28). Operation in the range 1MHz-40MHz is also met.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4,7 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kleinberg(US 4,862,114).

Art Unit: 2817

The reference by Kleinberg discloses a closed loop circuit oscillator device with a logic element(22, see figure 2A), a crystal(piezo,26), and resistor(24); note external capacitors(28). Operation in the range 1MHz-40MHz is also met.

The reference by Kleinberg does not show conventional ideas such as a buffer inverter on the output nor the use of CMOS implementation, however these are notoriously well known ideas, for example, the buffer providing output enhancement and load matching also, the logic inverter stage is conventionally a CMOS type inverter stage.

In light of the above it would have been obvious for one of ordinary skill in the art to have recognized that the closed loop circuit in Kleinberg would benefit from the conventional buffer output for load matching and that the inverter logic stage may be implemented using the conventional high speed CMOS FET devices, for example.

***Allowable Subject Matter***

5. Claims 8, 9, and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. Claims 13-20 are allowed.

Art Unit: 2817

***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
